

Task : 4

Tasks

1.

Open a terminal and use the 'ls', 'cd', and 'pwd' commands to navigate to the /home directory, then list all user folders present. Take a screenshot of your terminal showing the commands and output.

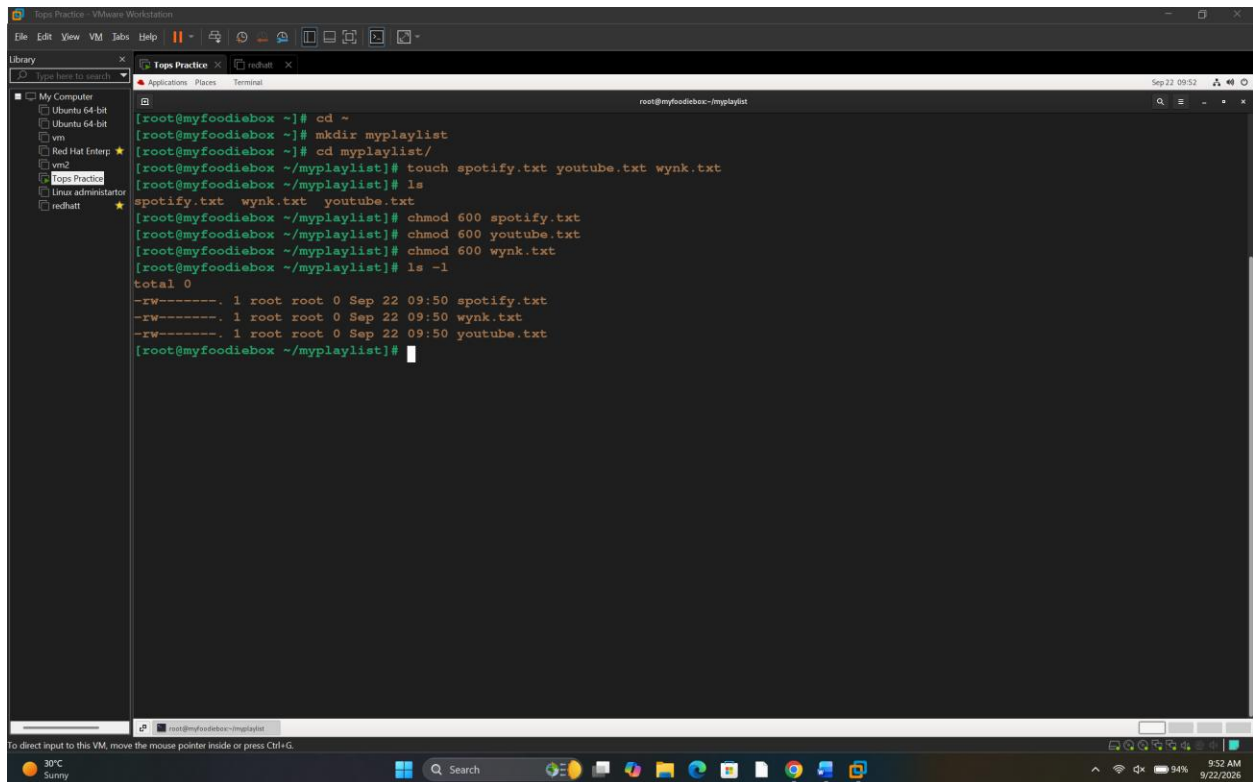

```
[redhat@myfoodiebox ~]$ su -
Password:
[root@myfoodiebox ~]# pwd
/root
[root@myfoodiebox ~]# cd home
-bash: cd: home: No such file or directory
[root@myfoodiebox ~]# cd /home/
[root@myfoodiebox /home]# ls
cronuser  moon  redhat  sun  u1  u2  user1  zomatouser
[root@myfoodiebox /home]#
```

2.

Create a new directory called 'myplaylist' inside your home folder, then use 'touch' to create three empty files named spotify.txt, youtube.txt, and wynk.txt inside it. Set the permissions so only you (the owner) can read and write these files, but others cannot access them.

Hint: Use 'chmod 600' on each file after creating them.

>

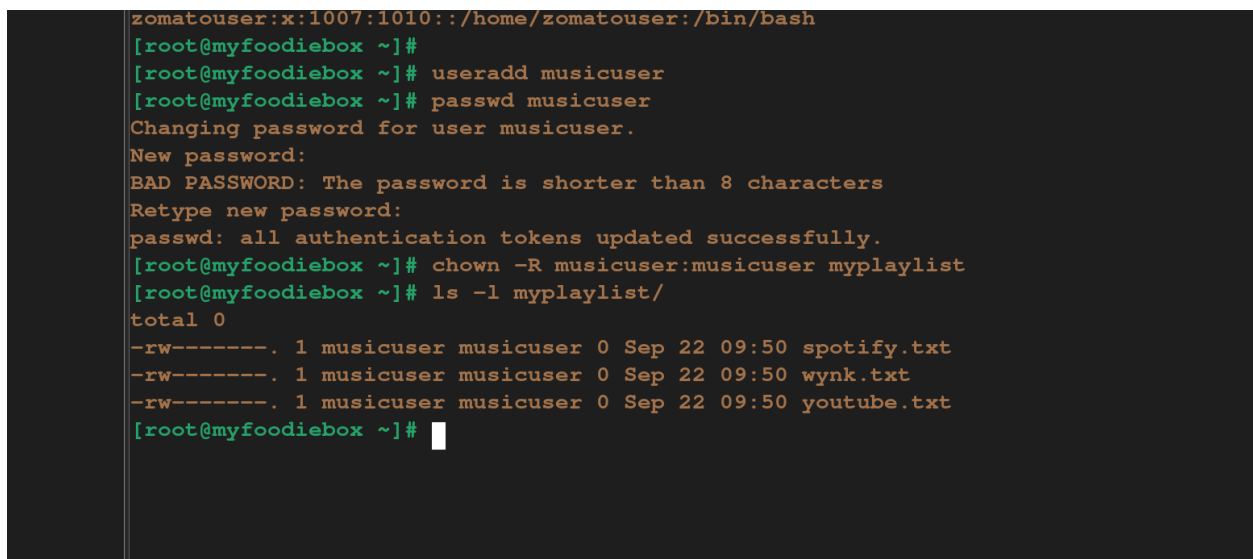

```
[root@myfoodiebox ~]# cd ~
[root@myfoodiebox ~]# mkdir myplaylist
[root@myfoodiebox ~]# cd myplaylist/
[root@myfoodiebox ~/myplaylist]# touch spotify.txt youtube.txt wynk.txt
[root@myfoodiebox ~/myplaylist]# ls
spotify.txt  wynk.txt  youtube.txt
[root@myfoodiebox ~/myplaylist]# chmod 600 spotify.txt
[root@myfoodiebox ~/myplaylist]# chmod 600 youtube.txt
[root@myfoodiebox ~/myplaylist]# chmod 600 wynk.txt
[root@myfoodiebox ~/myplaylist]# ls -l
total 0
-rw-----. 1 root root 0 Sep 22 09:50 spotify.txt
-rw-----. 1 root root 0 Sep 22 09:50 wynk.txt
-rw-----. 1 root root 0 Sep 22 09:50 youtube.txt
[root@myfoodiebox ~/myplaylist]#
```

3.

Change the ownership of the 'myplaylist' directory and all its files to another user on your system using the 'chown' command. If you are the only user, create a new user first.

Hint: Use 'sudo adduser newusername' to create a user if needed.

>

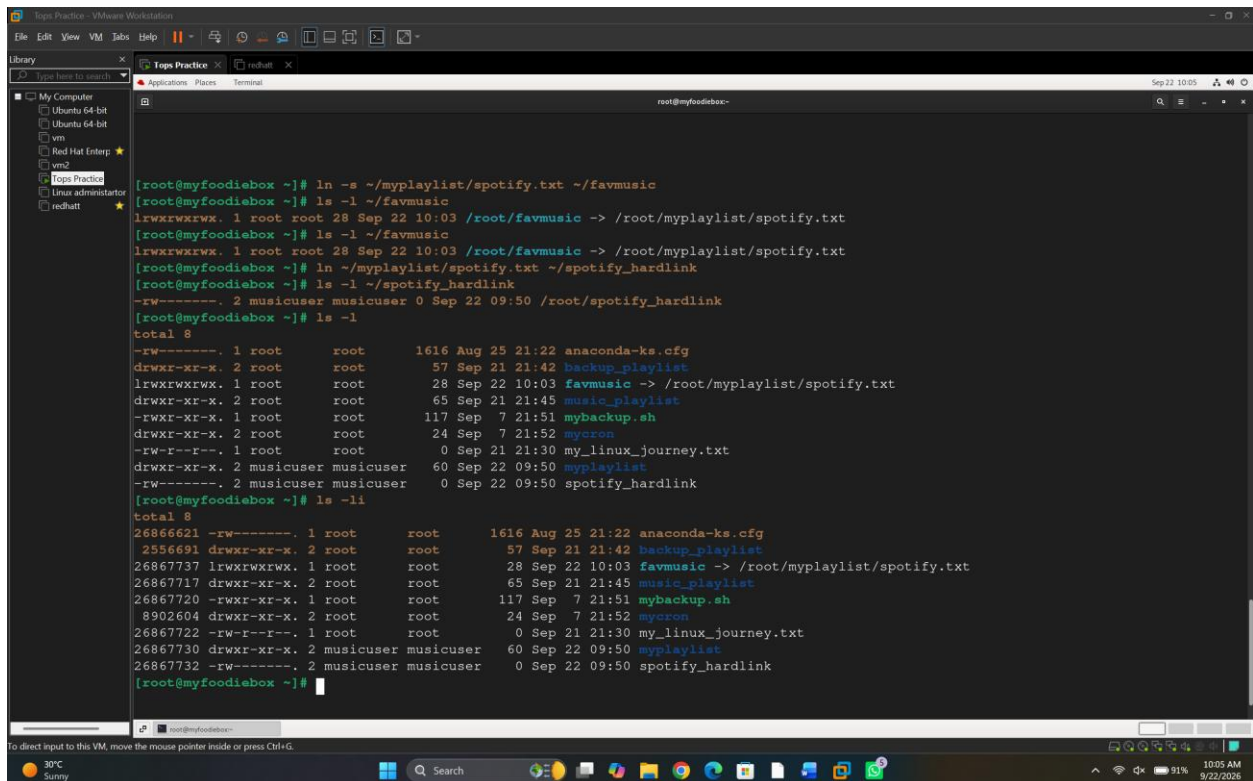

```
zomatouser:x:1007:1010::/home/zomatouser:/bin/bash
[root@myfoodiebox ~]#
[root@myfoodiebox ~]# useradd musicuser
[root@myfoodiebox ~]# passwd musicuser
Changing password for user musicuser.
New password:
BAD PASSWORD: The password is shorter than 8 characters
Retype new password:
passwd: all authentication tokens updated successfully.
[root@myfoodiebox ~]# chown -R musicuser:musicuser myplaylist
[root@myfoodiebox ~]# ls -l myplaylist/
total 0
-rw-----. 1 musicuser musicuser 0 Sep 22 09:50 spotify.txt
-rw-----. 1 musicuser musicuser 0 Sep 22 09:50 wynk.txt
-rw-----. 1 musicuser musicuser 0 Sep 22 09:50 youtube.txt
[root@myfoodiebox ~]#
```

4.

Inside your home directory, create a symbolic link named 'favmusic' that points to the spotify.txt file you created earlier. Then, create a hard link named 'spotify_hardlink' to the same file. Show the output of 'ls -l' and 'ls -li' to demonstrate the difference between the links.

>

```
[root@myfoodiebox ~]# ln -s ~/myplaylist/spotify.txt ~/favmusic
[root@myfoodiebox ~]# ls -l ~/favmusic
lrwxrwxrwx. 1 root root 28 Sep 22 10:03 /root/favmusic -> /root/myplaylist/spotify.txt
[root@myfoodiebox ~]# ln ~/myplaylist/spotify.txt ~/spotify_hardlink
[root@myfoodiebox ~]# ls -l ~/spotify_hardlink
-rw-r-----. 2 musicuser musicuser 0 Sep 22 09:50 /root/spotify_hardlink
[root@myfoodiebox ~]# ls -li
total 8
-rw-r-----. 1 root root 1616 Aug 25 21:22 anaconda-ks.cfg
drwxr-xr-x. 2 root root 57 Sep 21 21:42 backup_playlist
lrwxrwxrwx. 1 root root 28 Sep 22 10:03 favmusic -> /root/myplaylist/spotify.txt
drwxr-xr-x. 2 root root 65 Sep 21 21:45 music_playlist
-rwxr-xr-x. 1 root root 117 Sep 7 21:51 mybackup.sh
drwxr-xr-x. 2 root root 24 Sep 7 21:52 mycron
-rw-r--r--. 1 root root 0 Sep 21 21:30 my_linux_journey.txt
drwxr-xr-x. 2 musicuser musicuser 60 Sep 22 09:50 myplaylist
-rw-r-----. 2 musicuser musicuser 0 Sep 22 09:50 spotify_hardlink
[root@myfoodiebox ~]#
```

5.

Suppose you want to share your 'myplaylist' folder with a group of friends on the same Linux system. First, create a new group called 'musiclovers' using the 'groupadd' command, add your user to this group, and then change the group ownership of 'myplaylist' to 'musiclovers' using 'chgrp'. Set the permissions so that only group members can read and write files in this directory, but others cannot.

Hint: Use 'chmod 770' on the directory after changing the group.
